## APPENDIX

### CONCISE EXPLANATION OF THE RELEVANCE OF THE NON-ENGLISH LANGUAGE REFERENCE(S)

Korean Utility Model 1996-0007233 shows a cup having a thread about its open end. A die cast actuating body carrying a rotatable blade is arranged to be threadingly engaged on the cup to seal product within the cup. The actuating body also has drive means configured to be engaged on the drive shaft of a base unit when the cup/body is inverted. The body includes a projection for triggering a switch on the base unit, to cause rotation of the blade.

In use, the actuating body is united with the cup, inverted and then placed on the base unit in engagement with the drive shaft. As illustrated, the cup is intended to be held manually in driving engagement with the drive means. Rotation of the blade only occurs when the user “pushes down” on the cup, whereby the projection triggers the switch to cause rotation of the blade. If downwards pressure is released, the switch is released and rotation is interrupted.
